Taller de JavaScript y ES6

BANCO LAFISE BANCENTRO SA

Exponer los elementos más relevantes para el desarrollo basado en JavaScript.

Explicar las tendencias en el mercado.

Utilizar las bases teóricas para crear un ejemplo con una API gratuita.

Qué es JavaScript?

JavaScript es un lenguaje de programación que se trabaja desde el navegador.

Fue desarrollado por Brendan Eich de Netscape con el nombre de Mocha, luego LiveScript y finalmente JavaScript.

Características

- Interpretado en el agente de usuario.
- Orientado a objetos
- Débilmente tipado
- Tradicionalmente se venía utilizando en páginas web únicamente del lado del cliente.

```
var x = 15; // Number (int) declaration
var y = 15.6 // Number (float) declaration
var z = 'Hello World' // String declaration
```

Qué ES6?

Es una especificación que se ha publicado con el fin de estandarizar Javascript.

ECMA Script 6, ES6 o ES2015 es el nuevo estándar de Javascript (versión 6) y tiene algunos cambios significativos en su sintaxis que permite escribir código de forma más rápida y limpia.

Pasos para usar ES6

```
1. Seleccionar herramienta
```

2. Entry points/ Outpus files

3. Diseño

4. Ejecución de tareas

```
"scripts": {
  "build": "webpack --config webpack.config.js"
},
```

WorkFlow

- Babel.js para hacer compatible el estándar nuestro javascript usando ES6.
- Polyfills son código que permiten simular nuevas características de JavaScript en navegadores que no tienen soporte nativo para ellas
